ICBiotech has its origin from the “International Center of Cooperative Research Center in Microbial Engineering Japan (ICME)” which was established in the Faculty of Engineering, Osaka University in April 1978, through renaming to “International Center of Cooperative Research in Biotechnology (ICBiotech)” in April 1985 with the recognition of the wide acceptance and success of ICME’s activities and achievements.

ICBiotech is dedicated to promote international cooperation among Asian countries in the aspects of research and educational advancement in the field of Biotechnology by propelling academic interactions in Asian countries, and is committed to industrial biotechnology studies by means of microbial engineering and related sciences, focusing on the sustainable utilization of abundant natural resources in Southeast Asian countries.

ICBiotech has served as the seat of education and research in Asia, with the support of the Ministry of Education, Culture, Sports, Science and Technology (Monbu-kagaku-sho, MEXT), the Japan Science and Technology Agency (JST), the Japan Student Service Organization (JASSO) the Japan International Cooperation Agency (JICA), and other related funding agencies, in cooperation with the Department of Biotechnology, Graduate School of Engineering, The University of Osaka, as well as researchers from prestigious universities nationwide and abroad.

In 2002 Cooperative Research Station (CRS) in Southeast Asia and Mahidol University-Osaka University Collaborative Research Center for Bioscience and Biotechnology (MU-OU:CRS) were set up at Faculty of Science, Mahidol University in Thailand as a collaborative research center to accomplish multidisciplinary research in the field of Bioscience and Biotechnology.

The activities of the ICBiotech include:

1. Research and Education

The main area of research is industrial biotechnology rooted in microbial engineering, whilst centering on the sustainable use of agricultural and forest resources in bioresource-rich countries such as those in Southeast Asia. Research is underway in the field of cell engineering with the objectives of analyzing the cellular functions of bacteria, fungi and plants, and developing and using functions of these cells for management and rational use of biological resources that exist on our planet. ICBiotech covers three areas of Biotechnology:

- 1) Discovery of new functions from biological resources.
- 2) Bio-conversion and process engineering of biological resources.
- 3) Conservation of biological resources.

For undergraduate and post graduate courses, ICBiotech is involved in the education activities of Department of Biotechnology, Graduate School of Engineering as collaborating laboratories and currently covers several fields of biotechnology in education and research: Applied Microbiology Laboratory chaired by Prof. FUJIYAMA Kazuhito and

Molecular Microbiology laboratory chaired by Prof. HONDA Kohsuke.

2. Participating in FrontierLab@OsakaU 'Scientific Empowerment Program for International Students' which was created for international students to conduct thematic studies and achieve results under the guidance of supervisors while acquiring skills necessary for continuing research in one of The University of Osaka's internationally renowned science and technology laboratories for a period of up to 12 months.
3. Acting as collaborating laboratories with Department of Biotechnology, Graduate School of Engineering, The University of Osaka for 'Biotechnology' and 'Industry-University Co-Creation'. The aim of this program is to expose graduate students (privately financed as well as the Japanese Government Scholarship students) to state-of-the-art research skills and in-depth knowledge of advanced biology to harness the potential of biotechnology.
4. Promoting international cooperative researches in biotechnology with the Southeast Asian countries related to biotechnology. In addition, ICBiotech cooperates in developing international organization and conducting academic seminars related to biotechnology.
5. Implementing Student Exchange Program with the support of JASSO. Under the program, graduate students of The University of Osaka are sent to Thai four universities for a field study program named "Global Leadership Development Program for Driving the Bioeconomy", and graduate students of Thailand and ASEAN countries are invited to The University of Osaka for lab study programs named "Japan-ASEAN Program for Developing Bridge-Building Talent in Bio-Manufacturing", all for about 5 weeks.
6. Inviting Asian students through Sakura Science Plan (SAKURA SCIENCE Exchange Program) of JST to introduce and offer experiences in Japanese science and technology. By exchanging ideas among the participants, the Plan aims to support the development of talented people overseas who have the potential to contribute to innovation in science and technology and support continuous interaction between Japan and other countries; to promote globalization of Japanese education and research institutes; to strengthen good relationship between Japan and other countries.
7. Implementation of international collaborative research with RWTH Aachen, Germany, supported by the JSPS International Leading Research Program. Implementation of student exchange programs with Bielefeld University, Germany, supported by the Erasmus+ Program.
8. Implementing Plant Biotech Program with the University of California, Davis, that enhances cooperation between the two universities to promote healthy and sustainable planet by exploring the intersectionality of biology and engineering.
9. Promoting ASEAN Campus Project organized by The University of Osaka that aims at contributing to "Quality Growth" and the development of high-level global human resources for the next generation in ASEAN countries and Japan.
10. Periodical publishing of Annual Reports of ICBiotech.

I. COOPERATIVE RESEARCH STATION (CRS) IN SOUTHEAST ASIA

The ICBiotech, The University of Osaka launched out the Cooperative Research Station (CRS) in Southeast Asia at Chalermprakiat Building, Faculty of Science, Mahidol University in 2002 through the generous support by Mahidol University. The CRS's space and equipments are made available for Southeast Asian and Japanese researchers to undertake cooperative onsite researches on the development of the abundant natural biological and genetic resources and their sustainable utilization in Southeast Asian countries through JSPS core university program (ended in 2005), JST Special Coordination Funds for Promoting Science and Technology (2006-2009) and JSPS Asian CORE Program (2009-2014). The CRS also functioned as a lecturing and research station of the UNESCO International Post-graduate Inter-University program, which The University of Osaka operated in coordination with Thai universities. The CRS is considering support to the alumni of The University of Osaka and provision of university information for recruitment of students for study in The University of Osaka. Moreover, the CRS has become the base for the research at the DDP program with Mahidol University.

Mahidol University (MU) and The University of Osaka together established the Mahidol University-Osaka University Collaborative Research Center (MU-OU:CRS) for Bioscience and Biotechnology at Faculty of Science, Mahidol University in 2002, to strengthen the research cooperation in these fields which are amongst the most active fields of study and research in both universities.

Currently, MU-OU:CRS has coordinated a research projects under the jointly support of National Research Council of Thailand (NRCT), National Center for Genetic Engineering and Biotechnology (BIOTEC) and The Japan Society for the Promotion of Science (JSPS). Researchers from Mahidol University, Chulalongkorn University, Kasetsart University, King Mongkut's University of Technology Thonburi and BIOTEC participate in this project.

CRS is conducting researches on:

1. Identification and characterization of unique enzymes.
2. Screening for bioactive compounds from actinomycetes and related microorganisms, and elucidation of their biosynthetic pathways.
3. Adapting Laboratory Evolution of industrially useful microorganisms.

In addition to above, CRS has been taking care of graduate students of The University of Osaka sent to Thai universities and Thai graduate students sent to The University of Osaka under the JASSO Student Exchange Support Program (details in Chapter III) from FY2011. (For FY2020 and FY2021, this program was cancelled due to COVID-19).

II. JASSO STUDENT EXCHANGE SUPPORT PROGRAM Scholarship for Short Stay/ Short Visit Program (SSSV)

This is a field study program jointly operated with several universities in Thailand and 3 ASEAN countries. In 2024, 24 first year students of the master's course of The University of Osaka was supposed to visit 4 universities in Thailand between August 8 and September 13, and 6 postgraduate students from Thailand, Philippines, and Indonesia was supposed to visit The University of Osaka between September 26 and October 28, 2024, and 5 postgraduate students from Thailand, Indonesia and Vietnam was supposed to visit The University of Osaka between November 15 and December 17, 2024 which enhanced mutual interactions.
